Mercotac® connectors contain a small amount of liquid mercury should be disposed of properly through recycling. Mercotac Inc. offers a recycling service for this purpose. When shipping spent units Mercotac Inc., insert products into a plastic bag and package items be returned for UPS Ground shipment. Please state on paperwork "For Recycling", and identify shipments with company name and Phone / FAX numbers. (Do not send through USPS.)

1. Mercotac ${ }^{\circledR}$ connectors can be used both horizontally and vertically. However the "UP" arrow on the body of the connector should not point below horizontal. The connectors are reversible so they need not be installed upside down. It is preferable to store units upright (arrow up). <Fig 1>
2. The connector can be held or mounted by the body or plastic bushing, but was not designed to carry mechanical loads. One end should be allowed to float attached only by the connecting wires. In horizontal applications mount the connector with the body rotating to reduce mechanical loads on the bearing and internal components. Never rigid mount both ends of the connector. This will cause connector failure. Limit mounting eccentricity to .005 " (.13mm). <Fig $2>$
3. Do not solder to the connector or bend tabs excessively as such misuse may cause connector failure and voids the warranty.
4. Use stranded wires of ample length and flexibility to avoid mechanical loads. Avoid taut wires that pull on the connector. The wires should have enough free play to allow the connector end to rotate approximately $1 / 4$ turn. Wires, which allow too much free play, could wrap around the connector. Generally wires are strong enough to restrain the stationary end of the connector. A floating torque arm attached to the stationary bushing may be used if the wires are not adequate. $<\mathrm{Fig} 3>$
5. Provide current protection (fuse) on wires attached to connector. Over-current conditions can cause failure of connector. CAUTION: The aluminum body may be electrically "hot" after failure. Disable power source before handling a suspected failed connector.
6. The push on terminals (right angle \& straight) supplied with the modular connector series use an improved double wall barrel design vs. typical single wall barrel. The extra strength in the barrel improves electrical conductivity and wire grip. Some crimp tools do not have enough leverage to securely crimp this terminal which could cause poor connections. The shape of the crimp die also affects the quality of the crimp, especially for the smaller wire sizes. A recommended crimp tool manufactured by Thomas \& Betts is their model \#WT112M. The right angle terminals can be configured on the 830 and 630 models as shown. <Fig 4>
7. Vibration and mechanical shock will reduce service life or cause connector failure. Some installations may require a shock isolating mounting, such as rubber tubing. <Fig 5>
8. The connector contains plastic materials, which are sensitive to heat. Over-heating will cause reduced life or connector failure. Provide thermal insulation where necessary to prevent temperature of the unit from exceeding $140^{\circ} \mathrm{F}\left(60^{\circ} \mathrm{C}\right)$. $<$ Fig 6>
9. In food packaging applications: Mercotac ${ }^{\circledR}$ connectors contain liquid mercury and other fluids. Isolate connector from the food processing area by using a protective housing. Short circuit failure at or in connection with a Mercotac ${ }_{\circledR}$ connector rarely but occasionally may result in leakage. The use of a protective housing may be advisable in these applications. $<$ Fig 7>

WARRANTY: Units are guaranteed for one year from date of purchase against defective materials and workmanship. Replacement will be made except for defects caused by abnormal use or mishandling. All statements and technical information contained herein, or presented by the manufacturer or his representative are rendered in good faith. User must assume responsibility to determine suitability of the product for intended use. The manufacturer shall not be liable for any iniurv. loss or damage. direct or conseauential arising out of the use. or attempt to use the product.
